EDUCATION

University of California, Los Angeles | B.S., Statistics & Data Science | Expected Graduation: Spring 2027

- GPA: 3.86/4.0 | Relevant Coursework: Probability, Mathematical Statistics, Statistical Programming, Linear Regression.

Los Angeles Pierce College | 2024-2025

- GPA: 4.0/4.0; Dean's Honor List. | Coursework: Linear Algebra, Calculus I/II/III, Statistics, C++.

EXPERIENCE

TVLIP | *Data Science & Machine Learning Intern* | Jan 2026 – Apr 2026

- Built and evaluated predictive models (LightGBM, logistic regression, gradient boosting) in Python on **1.2M+** records, running **240+** cross-validated experiments to raise macro F1 from **0.71** to **0.86**.
- Conducted exploratory data analysis and feature engineering across large messy datasets, using statistical tests and correlation analysis to identify the strongest predictive signals and drivers of model performance.
- Performed error and segment-level analysis (confusion matrices, calibration curves, cohort slices) to diagnose model weaknesses and quantify performance disparities across groups.
- Wrote SQL against a normalized MySQL schema to structure training data and built analytics reporting on model quality, translating results into insights for technical and non-technical stakeholders.

S&F Services | *Data Science & Analytics Intern* | Jun 2025 – Sep 2025

- Built end-to-end data pipelines in Python (Pandas, NumPy) and SQL to ingest, clean, and structure **500K+** records from multiple sources into query-ready tables, cutting data-prep time by **35%**.
- Wrote SQL queries against a normalized MySQL schema (**6** tables, **20+** columns) with foreign-key and ENUM constraints to enforce referential integrity.
- Trained and evaluated multiclass classifiers (LightGBM, Logistic Regression) with **5-fold** cross-validation and out-of-fold scoring, reaching **0.83** macro F1 and surfacing top predictive features.
- Applied statistical analysis (regression, hypothesis testing) to quantify trends and segment-level disparities, translating results into interactive dashboards.

LAPC Center for Academic Success | *Mathematics and Statistics Tutor* | Jan 2025 – Jun 2025

- Delivered one-on-one and small group tutoring in Calculus I/II/III, Linear Algebra, and Statistics, in-person and online; organized and led exam-season workshops and study groups.

PROJECTS

UCLA ASA DataFest 2026 — Team Lead

- Led a 4-person team analyzing **7.6M+** hospital encounters to quantify race-based disparities in chronic-disease patient journeys, anchored on a **25,668**-patient Type 2 Diabetes cohort and replicated across four additional conditions.
- Engineered a reproducible Python pipeline linking patient, encounter, diagnosis, and social-determinants data, deriving journey metrics with bootstrap confidence intervals and nested logistic-regression mediation models.
- Built dashboards surfacing entry-point patterns and equity gaps; found minoritized patients enter via the ED at **1.9-3.3x** the rate of White patients after adjusting for social determinants and geography.

NYC 311 City Complaints Intelligence System

- Built an end-to-end NYC 311 analytics pipeline (SQLite + yearly Parquet) and a rule-based NLP taxonomy converting complaint descriptions into issue families, subtypes, resolution outcomes, and model-ready features.
- Trained multiclass resolution-time classifiers on **200K+** complaint records using HistGradientBoosting and Logistic Regression, evaluating with feature importance, error slices, confusion matrices, and borough-level fairness metrics.

NBA Shot Quality Analytics Platform

- Built an end-to-end NBA shot-quality pipeline analyzing **654,609** field-goal attempts across three seasons, generating per-shot expected points and **983** player-season shooting profiles.
- Trained a LightGBM xPoints model with game-grouped validation and out-of-fold scoring (Points Over Expected validated as a repeatable skill, **0.58** YoY correlation), and shipped a public interactive dashboard.

SKILLS AND INTERESTS

- Languages & Analysis: Python (Pandas, NumPy, Scikit-learn, LightGBM), R (Tidyverse, ggplot2, Shiny), SQL, MySQL
- Statistics & Reporting: regression, hypothesis testing, A/B testing, data visualization, Streamlit, Excel, Git, GitHub
